# MOW CAR KITS

## 120 ton Industrial Brownhoist Steam Wrecking Crane

This exciting kit described by the Japanese magazine TRAIN as “the finest plastic kit to ever come from America”, contains over 200 perfectly fitting parts-but don’t let that scare you! Superb instructions assist in a fun-filled 10-12 hour assembly into the most perfect miniature replica ever. Prototype photos show many of the prototype variations possible. A challenge, but not a hassle. Truly our most super SUPERKIT!

Used by almost all railroads. Many are still in service. Some under steam, others converted to diesel. Era is 1909 to the present. Shown with Champ decal BRH-32

**KIT 4010 \$28.50**

## Boom Car

Era 1927 to present

A necessary companion to our crane. This super-detailed car is typical of those “home-built” in the company shops. Easily modified to suit your own needs or favorite prototype. The kit includes accessory items such as slings, hooks and spreader bars.

A welcome addition to your wrecking train.

## Handcar and Trailer - 6 Sets

This kit builds six handcars and 6 trailers. The handcars can be built with or without benches. Versions with benches were used in yards, terminals, and at construction sites to transport people. Ones without, were used for track inspection. Trailers were used to transport materials. Used in all eras.

## 22' Wood Ore Cars

Era 1900 to 1935

A true classic! This heavy duty "Great Lakes" ore car captures the familiar look of eastern and western mining. A ten car train is only 33" long; perfect for the tight curves and steep grades of period modeling.

These fun kits take about 30 minutes each to build and are a great introduction to plastic modeling.

## Tank Car

Era 1918 to 1955

This car is typical of the "industry standard" tanker. They were used for decades to haul crude oil, often in long tanker trains—"the pipeline across America" in the age before Supertankers.

Produced to the USRA basic design, variations of this car were made by a number of carbuilders. This kit features the 54" dome with optional man-hole covers and molded end handrails.

Some are still in non revenue service.

## Flat Car

Era 1926 to the late 1950's

This 40', 50 ton car was built in 1926 by AC&F - typical of the heavy duty flats from that time. The kit features a complete underframe and super realistic deck that you won't want to replace! Instructions include painting and deck weathering techniques.

This kit proves that even a "lowly" flat car can be exciting to build.

## Wheel Car

Era 1930 to Present

These cars were converted in their own shops by the Milwaukee and other roads from flat cars to transport wheelsets for company use. Our freelance model closely follows a group of cars the Milwaukee converted in the 1930's. Forty scale wheelsets are included.

## PFE Wood Reefer

Era 1928 to 1960's

For many years, one of the most "awe-inspiring" sights in railroading was the mile long "reefer block". It was pulled by the most powerful locomotives in history, rushing fresh produce across America in a bright ribbon of color. This kit builds the R-40 as operated by the SP/UP and WP railroads. Kit will build classes R-40-4, R-30-9 and by using the drill jig with your grabirons R-30-13 & R-40-2.

## USRA Single Sheathed Box Car

Era 1918 to the late 1950's

Built under the mandate of the USRA, these composite (wood/steel) cars were rugged, versatile and popular. 25,000 were built by over a dozen carbuilders for more than twenty railroads, overlapping well into the "steel" age. Some were in non-revenue service as late as 1965.

Era 1918 to 1972

These all steel hoppers were the most enduring of all the USRA designs. 22,000 were built for 23 railroads. In addition, the basic design was adopted as standard by the ARA in 1922. Cars remained in service through at least 1972.

## Panel Side USRA Hopper

Era 1930's to the 1970's

When USRA hoppers became due for rebuilding in the 30's and 40's, many roads elected to replace the flat sides with panel sides, resulting in a capacity increase of 80 cu. ft.

The "D" version includes a decal covering the C&O, D&H, Wabash and New Haven. Includes both K and AB brake systems.

## USRA SS Rebuilt With Ribbed Steel Sides

Era 1930's to 1970's

The Georgia RR and several other railroads chose to upgrade their USRA SS cars with steel plates welded to the inside of the bracing in place of the original wood. This was a quick and inexpensive method of obtaining an all steel car. It did not increase the interior capacity as much as the Youngstown sides and ends. AB brakes are included. "D" versions include a Georgia RR decal.

## Panel Hopper Converted For Grain Use

Era 1961 to 1983

This car is representative of a series of 114 cars (#'s 131 to 244) acquired by The Andersons Company in 1961 and used in grain transport. Since grain was lighter than coal, the sides were extended to increase the cubic capacity. A canvas cover protected the grain. A cast resin top and custom decal are included. These cars were painted silver and based in Maumee, Ohio. The last ones were retired in 1983.

## Cement Car USRA Conversion

Era 1934 to the 1970's

In 1934, the D&H converted 30 SS USRA boxcars to carry bulk cement with the addition of roof hatches, wine discharge gates and interior slope sheets. They were in the # series 17001 - 17500. The B&O also converted 40 cars numbered from 287000 - 287039. After 1960, these cars were used in company sand service with the D&H operating at least one into 1985. "D" versions include a D&H decal, see decal section for B&O decals.

## Canadian Pacific USRA Clone

Era 1921 to 1980's

In 1921, the Canadian Pacific RR built a fleet of 3500 SS USRA copies. They were identical with the USRA standard except for the use of 7/8 ends instead of the 5/5/5 end. As built, they had grain unloading hoppers under the doors, but these quickly disappeared. This kit represents the post 1940 version with no grain doors, AB brakes, 7/8 ends and Bettendorf trucks. ## Flat Car / Low Side Gondola

Era 1917 to 1968

In 1917, 1000 40 foot, 40-ton steel frame flat cars were built for the ACL RR to a standard design with 10 stake pockets. (4021 is the later 50 ton design with 11 stake pockets) Similiar cars were built for most RR's. Many were converted to low side gondolas by the addition of stakes and planking. You can build the kit as either a flat or the gondola. "D" versions include an ACL decal.

## 53' War Emergency Gondola

Era 1943 to the 1970's

These cars were built during WWII and were designed to use a minimum amount of steel due to wartime shortages. They remained in revenue service through the 70's and remain in mw service today. They were owned by the PRR, NYC, C&O, N&W, SANTA FE, IHB, MC, CNJ, LV and the READING among others. They were primarily used as mill gons to transport structural steel and other large and bulky items. Eventually, most had their wood sides replaced with steel plate. "D" versions contain a decal for N&W, PRR, NYC ATSF and ROCK ISLAND.

## 40' Pulpwood Flat

Era 1930's to present

These cars were used to carry pulpwood (small diameter logs of no other commercial value that were used to make paper). They were converted from old flatcars by the addition of a steel deck sloped to the center and bulkhead ends. They were used by the ACL, SEABOARD, SOUTHERN and many other roads that had logging operations in their service area. "D" versions contain an ACL decal.

## Stump Car

Era 1970 to present

Both the ACL and the SCL converted pulpwood cars into stump cars. These were used to haul stumps from logging operations to chemical plants that extracted chemicals from the pine tar in them. The conversion was done simply by using steel plates with a pair of angles reinforcing the top edge and channels for vertical support. The gap between the plates and the deck allowed debris to be swept out easily. "D" versions contain a SCL decal.

## 53' 6" GSC Flat Car

Era 1950 to the present

These cars were built from one piece castings supplied by the General Steel Casting Corp. All the RR added was a deck, trucks, brake gear and safety appliances. Because of their one piece design, these cars were extremely long lived. Most RR's had them. This is a beginners kit and does not include brake gear as it is not visible.

## **OUR PHILOSOPHY**

We bring together the best of two worlds, combining the fun and reward of fine modelbuilding with the rapidly growing interest in prototype railroading, freight cars and structures in particular. The preservation of history in miniature.

## **ABOUT OUR KITS**

We're concerned about the details - and not only prototype details. We design and manufacture our kits and parts to the highest possible standards. Our parts are designed to fit together and if they don't we remake the tooling before we release the kit. Molded in a light grey, easy to paint styrene (that reflects light, making even the smallest part easy to see) parts are crisp and virtually flash free. Spares are usually provided for those smaller parts that might get lost or damaged during assembly. Preformed grabirons made from phosphor bronze wire are included where applicable.

Illustrated step-by-step instructions are included. These include prototype history and a painting guide. To avoid confusion, each part is identified by its correct name, and is keyed to the instructions by a number engraved on the "runner" or by a printed layout.

Only minimal tools are required; modelers knife, small file, precision tweezers, and a small brush to apply liquid cement. Additionally, you will need either aerosol paint or an inexpensive airbrush.

So give us a try - we know that you will agree with many thousands of modelers like yourself that these are...

## **SUPER KITS JUST FOR THE FUN OF IT!!**

## **AVAILABILITY**

We manufacture our own tooling and do all of our plastic injection molding in-house along with our own printing and packaging. As a result, we can make what we want, when we want, without depending on anyone else for major components. Our policy is to have every item in this catalog in stock at all times. As of the date, this catalog was printed, every item was in stock and we had no backorders.

These items (except where noted) are available through distributors to your local hobby store. They are also available direct and through our secure website.

Manufacturers interested in using our parts in their kits, should contact us for manufacturer pricing.
